

Summer, sun, seating comfort

Getting into a sizzling hot driver's seat? Sweating through the summer traffic jams? It's bound to put you in a bad mood, and there is no need for it either. The MagicComfort MCS10 air-conditioned seat cover is by far the better alternative. Just switch it on and enjoy the light, pleasant air floating across the entire surface of the seat and providing a massaging effect at the same time. The MCS10 has two cooling stages and provides supreme comfort, thanks to its ergonomic design.

No need to get into a hot seat!

Keep cool in the summer heat with an "air-conditioned" seat cover

The gist of the test report is as follows: "Heat can be so annoying, it affects your concentration and your speed of reaction. This is where an air-conditioned seat cover can help – the MagicComfort MCS10 by WAECO. We have taken a closer look at it:

strap it to the seat, connect it to the cigarette lighter, and off you go.

Cool air is fanned into the seat cover in two different stages and ejected through many tiny nozzles. Stage I gives you pleasant permanent cooling, stage II is fine for polar bears. Contoured to the body, the cover adds to the comfort of the seat."
